SECURITY UPGRADES AT DIVERSIFIED

Scranton, Pa. - June 12, 2009 - Diversified Information Technologies announced today through its President and CEO, Scott Byers, that it has enhanced its security monitoring through a combination of equipment upgrades and redefinition of position roles that enables both primary third party and secondary back-up onsite monitoring 24/7. This dual monitoring system has created redundancies that completely eliminate the possibility of any unanswered alarms or downtimes. This change will also allow for a more visible and interactive security presence who will escort clients and guests, conduct security tours, and respond quickly to any emergency situations needing a physical presence at its headquarters. "Diversified is constantly putting "Client First" which is the first of our core values and we continuously look for ways to improve the way we protect the security and confidentiality that our clients' critical information deserve in the most efficient and cost-effective manner", Byers said.

According to Joe Murray, Vice-President & CFO, who oversees the facilities maintenance, housekeeping, and risk management functions, "The greatest positive impact of any equipment enhancement for our clients can only result by taking a broad view of all these related operations. In almost all cases, a redefinition of the organization and its positions make the most sense and that is what we did. In order to better align our workforce with the upgrades, we eliminated 8 full time positions and 3 part time positions in housekeeping and security. A professional contractor who has cleared our background checks and signed the necessary confidentiality agreements will provide all housekeeping services. In addition to our security equipment upgrades and monitoring service enhancements, we created 3 new full time positions and 2 part time positions whose roles are best aligned with these upgrades and enhancements." Murray explained, "These improvements provide many benefits for our clients and for Diversified. We are also cognizant of the fact that this change impacts the lives of people whose positions were eliminated and Diversified does not take these matters lightly. We have taken steps to ensure the best transition possible for our departing employees."

Hillman Security & Fire Technologies (www.hillmantechologies.com) and Emergency 24 (www.emergency24.com) are Diversified's partners in security equipment and monitoring. "They have been our trusted partners for over ten years and are key to our success. We continue to work together to deliver state of the art security for our clients", said Mike Malkemes, Director of Facilities & Risk Management.

"It is my responsibility to make sure that Diversified never sits still and continuously finds better and more efficient ways to meet and exceed our clients' expectations. The Client is First in all of Diversified's decisions and actions and this is a reflection of how we live our values and deliver on our promises to our clients", Byers concluded.
